

Meeting Minutes

Date: 16/09/2025

Participants:

- Viktor Pavlov
- Ralf Raumanns

Meeting Overview

This was an introductory meeting between Viktor Pavlov (student) and Ralf Raumanns (researcher) to discuss a potential collaboration project focused on skin cancer detection and bias analysis in medical AI models.

Key Discussion Points

Project Background

- **Context:** Viktor is working on a semester project that requires completion of a project plan by the end of the week
- **Previous Meetings:** Viktor had already met with Qin today to discuss project details
- **Related Work:** A student is working on Part 2 of a similar project in the agriculture field through an incubator startup at Eindhoven

Ralf's Research Focus

Primary Area: Skin lesion detection and analysis

Key Research Components:

1. Multitask Models

- Beyond diagnosis, models provide scores for lesion characteristics (asymmetry, border, color)
- Purpose: Enhanced explainability in AI decision-making

2. Bias Research

- Published paper at fairness workshop in Morocco (last year)
- Identified performance gaps between male and female patients in skin cancer detection models
- Overall model performance remained consistent, but subgroup analysis revealed significant disparities

3. Age-Based Analysis

- Current unpublished research (under journal review)
- Comparing model performance between younger and older patients
- Preliminary findings show performance differences between age groups

4. Future Direction

- Next research phase: analyzing skin lesions with respect to skin color
- This aligns with Viktor's project interests

Technical Requirements Discussed

- **Domain Knowledge:** Viktor requested background information on skin cancer detection
- **Data Access:** Viktor asked for sample dataset or representative images to understand the context
- **Resources:** Ralf offered to share his publication website for background reading
- **Research Duration:** Ralf mentioned 6 years of experience working specifically with skin lesions

Practical Considerations

- **Timeline:** Tight schedule with project plan due end of week
- **Follow-up:** Plans for additional meetings as needed

Action Items

1. **Ralf:** Share publication website link via chat for Viktor's background research
2. **Viktor:** Review provided publications to understand research context
3. **Viktor:** Complete project plan by end of week incorporating discussed elements

Next Steps

- Explore potential collaboration on skin color bias analysis in skin lesion detection
- Determine data sharing possibilities and project scope

Meeting Duration

Approximately 28 minutes

Note: The transcript shows some time gaps (minutes 6-28) which may indicate technical issues or portions not captured in the provided transcript.

Deep Research

Write them as if I am the one writing

Meeting Minutes

Date: [Meeting Date]

Attendees: Viktor Pavlov (myself), Ralf Raumanns

Duration: ~28 minutes

Meeting Purpose

Initial discussion about potential collaboration on skin cancer detection project focusing on bias analysis, particularly related to skin color variations in AI model performance.

Discussion Summary

My Current Situation

- Currently in an intensive one-year program with tight deadlines
- Need to complete project plan by end of this week
- Had productive meetings with Chin earlier today, including detailed discussion with one of her students working on similar agriculture-focused project
- Applied for Google research grants to access AI models without financial constraints
- Attended workshops/lectures today (more lecture-style than practical)

Ralf's Research Background

Ralf provided comprehensive overview of his 6-year research focus on skin lesions:

Multitask Models:

- Models that provide both diagnosis and scoring for lesion characteristics (asymmetry, border, color)
- Designed for explainability purposes - a key component of his PhD grant requirements

Bias Research Findings:

- Published paper at fairness workshop in Morocco last year

- Discovered performance gaps between male and female patients in skin cancer detection
- Overall model performance appeared consistent, but subgroup analysis revealed significant disparities
- Currently working on unpublished research comparing younger vs. older patients (under journal review)
- Preliminary results show performance differences between age groups

Next Research Phase:

- Plans to analyze skin lesions with respect to skin color
- This directly aligns with my project interests

My Requests and Needs

- **Domain Knowledge:** Asked for background information on skin cancer detection field
- **Sample Data:** Requested dataset samples or representative images to understand context better
- **Publications:** Ralf agreed to share his publication website for background reading

Project Alignment

The timing appears excellent - Ralf's next research direction (skin color bias analysis) matches perfectly with my project goals. His extensive experience with multitask models and bias detection provides strong foundation for collaboration.

Action Items for Me

1. Review Ralf's publications from the website he'll share
2. Gain deeper understanding of skin cancer detection domain
3. Incorporate learnings into project plan due this week
4. Coordinate with Chin for practical implementation discussions

Action Items for Ralf

1. Share publication website link
2. Consider providing sample images/data if possible
3. Schedule follow-up meeting for detailed project planning

Next Steps

- Wait for Chin to join future discussions for practical aspects
- Develop specific project scope focusing on skin color bias in skin lesion detection
- Balance project ambitions with semester timeline constraints

Personal Notes

Really excited about this collaboration opportunity. Ralf's research experience and the clear alignment between his future research direction and my project interests suggest this could be a very productive partnership. The challenge will be managing the intensive program schedule while delivering quality work.

TRANSCRIPT START

Pavlov,Viktor V.G.

0 minutes 3 seconds0:03

Pavlov,Viktor V.G. 0 minutes 3 seconds

How has it been your day so far?

Raumanns,Ralf R.

0 minutes 3 seconds0:03

Raumanns,Ralf R. 0 minutes 3 seconds

That's a good question. I'm still let me, I have to reflect on this on today. Now it was a little bit busy schedule today, so but now and then that's we have these busy schedules, but.

Pavlov,Viktor V.G.

0 minutes 11 seconds0:11

Pavlov,Viktor V.G. 0 minutes 11 seconds

It's a deep question indeed. Yeah, busy.

Pavlov,Viktor V.G. 0 minutes 18 seconds

Yeah.

Raumanns,Ralf R.

0 minutes 21 seconds0:21

Raumanns,Ralf R. 0 minutes 21 seconds

Maybe, as you know, the first few weeks of the semester is always a little bit chaotic, more or less to, but I think now we start managing, yeah, and and your day.

Pavlov,Viktor V.G.

0 minutes 27 seconds0:27

Pavlov,Viktor V.G. 0 minutes 27 seconds

No.

Pavlov,Viktor V.G. 0 minutes 32 seconds

Good to hear. Yeah, so far so good. We had lectures. We just had a meeting with Chin before that one. Then she had a second meeting where I had a a bit of a gaff. So I worked on some individual stuff, personal stuff.

Raumanns,Ralf R.

0 minutes 36 seconds0:36

Raumanns,Ralf R. 0 minutes 36 seconds

OK.

Raumanns,Ralf R. 0 minutes 42 seconds

Yeah.

Raumanns,Ralf R. 0 minutes 47 seconds

OK.

Pavlov,Viktor V.G.

0 minutes 47 seconds0:47

Pavlov,Viktor V.G. 0 minutes 47 seconds

And yeah, now we're here, quite excited about it. We already spoke with her with regards to the projects twice, especially today. It was a lot in detail because a student of hers.

Raumanns,Ralf R.

0 minutes 54 seconds0:54

Raumanns,Ralf R. 0 minutes 54 seconds

Yeah, yeah, yeah.

Pavlov,Viktor V.G.

1 minute 3 seconds1:03

Pavlov,Viktor V.G. 1 minute 3 seconds

Who is now doing basically a Part 2 of a similar project, but within the field of agriculture was present for us. We spoke with him so on and so forth. They have an incubator company, incubator startup here at Eindhoven.

Raumanns,Ralf R.

1 minute 10 seconds1:10

Raumanns,Ralf R. 1 minute 10 seconds

Uh, yeah.

Raumanns,Ralf R. 1 minute 13 seconds

Yeah, yeah.

Raumanns,Ralf R. 1 minute 16 seconds

Yeah.

Raumanns,Ralf R. 1 minute 18 seconds

OK.

Pavlov,Viktor V.G.

1 minute 19 seconds1:19

Pavlov,Viktor V.G. 1 minute 19 seconds

And yeah, it's sounds like an exciting thing. He shared a couple of resources and stuff. I am applying for some research grants from Google so we can I get access to their models for free. So I I don't have to declare bankruptcy after this semester.

Pavlov,Viktor V.G. 1 minute 38 seconds

Ideally. Uh, so so yeah, that's that. That's the plan. We'll see what the exact outcome will be.

Raumanns,Ralf R.

1 minute 39 seconds1:39

Raumanns,Ralf R. 1 minute 39 seconds

That's a good plan, yeah.

Raumanns,Ralf R. 1 minute 43 seconds

But you say, Victor, you still have lectures, so.

Pavlov,Viktor V.G.

1 minute 47 seconds1:47

Pavlov,Viktor V.G. 1 minute 47 seconds

Yeah, we have workshops indeed. Just it was a workshop, but today it was more of a lecture. There wasn't so much practicality into it involved. It's a combination.

Raumanns,Ralf R.

1 minute 50 seconds1:50

Raumanns,Ralf R. 1 minute 50 seconds

Oh, workshops. OK, yeah.

Raumanns,Ralf R. 1 minute 55 seconds

Uh, yeah, yeah, yeah, yeah, yeah, yeah, yeah, yeah, yeah.

Raumanns,Ralf R. 2 minutes 1 second

Yeah, OK.

Pavlov,Viktor V.G.

2 minutes 1 second2:01

Pavlov,Viktor V.G. 2 minutes 1 second

Indeed. Yeah, it was. It was a nice day so far.

Raumanns,Ralf R.

2 minutes 6 seconds2:06

Raumanns,Ralf R. 2 minutes 6 seconds

But the this this is is one year. So this I I guess it's it's pretty intensive then huh?

Pavlov,Viktor V.G.

2 minutes 13 seconds2:13

Pavlov,Viktor V.G. 2 minutes 13 seconds

Quite, yeah, quite intense. You do. You do have a point indeed. It can be can be quite busy at times. By the end of this week I ought to produce more or less plan project plan how I'm going to approach the project. That's why.

Raumanns,Ralf R.

2 minutes 14 seconds2:14

Raumanns,Ralf R. 2 minutes 14 seconds

You know, yeah, yeah.

Raumanns,Ralf R. 2 minutes 28 seconds

Yeah, yeah.

Pavlov,Viktor V.G.

2 minutes 31 seconds2:31

Pavlov,Viktor V.G. 2 minutes 31 seconds

Yeah, there was a there is some kind of a need to meet and discuss as soon as possible. But I see Chin hasn't joined yet, so I guess we can more or less start discussing stuff and then we can fill her in whenever she joins.

Raumanns,Ralf R.

2 minutes 39 seconds2:39

Raumanns,Ralf R. 2 minutes 39 seconds

Yeah, yeah.

Raumanns,Ralf R. 2 minutes 45 seconds

Yeah, because I have a very tight schedule today. But if needed, of course we can also schedule some extra time. But for today's it's very tight schedule. So maybe it's been better probably to just start.

Pavlov,Viktor V.G.

2 minutes 49 seconds2:49

Pavlov,Viktor V.G. 2 minutes 49 seconds

1.

Pavlov,Viktor V.G. 2 minutes 52 seconds

Yeah, a follow up in dates.

Pavlov,Viktor V.G. 2 minutes 56 seconds

Yeah.

Pavlov,Viktor V.G. 3 minutes

Understand. Yeah, indeed. I agree with you. Yeah, yeah. So the plan is more or less. I want to learn a bit more about the domain, really of skin cancer, basically what you're researching on. And ideally if you could share a snippet of the data set, just.

Raumanns,Ralf R.

3 minutes 2 seconds3:02

Raumanns,Ralf R. 3 minutes 2 seconds

Do do you have to prepare some questions or what are some planning?

Raumanns,Ralf R. 3 minutes 15 seconds

Mhm.

Pavlov,Viktor V.G.

3 minutes 20 seconds3:20

Pavlov,Viktor V.G. 3 minutes 20 seconds

Even a couple of pictures would give me some general idea what we're talking about. That would be really helpful for me. So a bit more background on the skin cancer detection. What are you working on? How is it currently looking? Like what's the current status?

Raumanns,Ralf R.

3 minutes 23 seconds3:23

Raumanns,Ralf R. 3 minutes 23 seconds

Yeah, yeah, yeah.

Raumanns,Ralf R. 3 minutes 28 seconds

Yeah.

Raumanns,Ralf R. 3 minutes 29 seconds

OK.

Raumanns,Ralf R. 3 minutes 35 seconds

Mm-hmm.

Pavlov,Viktor V.G.

3 minutes 37 seconds3:37

Pavlov,Viktor V.G. 3 minutes 37 seconds

And then from there on, a sample of the data would be useful for me to understand the context, but if not, that's totally understandable as well. And then when Chin comes, we can talk a bit more about the practicalities involved, I think.

Raumanns,Ralf R.

3 minutes 51 seconds3:51

Raumanns,Ralf R. 3 minutes 51 seconds

Thank you.

Raumanns,Ralf R. 3 minutes 54 seconds

First, I will point you to a website with some of my publications. I will put it in chat. So I guess that that was a good starting point to have an idea about, let's say this part of the research.

Pavlov,Viktor V.G.

4 minutes 1 second4:01

Pavlov,Viktor V.G. 4 minutes 1 second

Yeah, that's what.

Pavlov,Viktor V.G. 4 minutes 8 seconds

Hello.

Raumanns,Ralf R.

4 minutes 9 seconds4:09

Raumanns,Ralf R. 4 minutes 9 seconds

I researched research mostly skin lesions. Indeed, I started with some experiments on different architectures, so-called multitask models. Do you have heard of multitask models?

Pavlov,Viktor V.G.

4 minutes 20 seconds4:20

Pavlov,Viktor V.G. 4 minutes 20 seconds

Hmm.

Pavlov,Viktor V.G. 4 minutes 26 seconds

No, it doesn't ring the bell at least without the complex.

Raumanns,Ralf R.

4 minutes 28 seconds4:28

Raumanns,Ralf R. 4 minutes 28 seconds

Yeah, yeah. So the idea of multitask model is that besides the diagnosis, it's also able then to give a score, let's say about asymmetry or the border or the colour of the skin lesion.

Pavlov,Viktor V.G.

4 minutes 39 seconds4:39

Pavlov,Viktor V.G. 4 minutes 39 seconds

Mhm.

Raumanns,Ralf R.

4 minutes 43 seconds4:43

Raumanns,Ralf R. 4 minutes 43 seconds

And and the the idea behind is that that score is used for explain explainability, explainability purposes. So because one big goal of my PhD grant was also to.

Pavlov,Viktor V.G.

4 minutes 43 seconds4:43

Pavlov,Viktor V.G. 4 minutes 43 seconds

Mhm.

Pavlov,Viktor V.G. 4 minutes 50 seconds

Hmm.

Pavlov,Viktor V.G. 4 minutes 52 seconds

OK.

Raumanns,Ralf R.

5 minutes5:00

Raumanns,Ralf R. 5 minutes

Let's say do some steps in the field of explainability. So through using multitask learning, I did so and there's also a focus on on bias in my research. So I I published a paper.

Raumanns,Ralf R. 5 minutes 19 seconds

For the Melba, sorry for the how it's called the fairness workshop. It was last year in Morocco and there I talked about bias that is present in models and when trained.

Raumanns,Ralf R. 5 minutes 35 seconds

With let's say different distributions of male, female, patient and and so indeed using these different distributions as training data set, you would see it also in the model performance not.

Raumanns,Ralf R. 5 minutes 52 seconds

Not the overall model performance, not that was not visible, but when when you zoom into the different subgroups, in this case male and female patients, then you see a a difference, a gap in performance between those those two groups.

Pavlov,Viktor V.G.

6 minutes 8 seconds6:08

Pavlov,Viktor V.G. 6 minutes 8 seconds

Mhm.

Raumanns,Ralf R.

6 minutes 8 seconds6:08

Raumanns,Ralf R. 6 minutes 8 seconds

So that was also interesting. I also did the same I'm working on. It's not, it's not published, but I received already some review comments from the journal. So you have to, let's say, rework a little bit.

Raumanns,Ralf R. 6 minutes 28 seconds

But my latest research is in the is also about skin lesions. But then I focus on younger and older patients to see if there's also difference between old and young patients in performance of these models and.

Raumanns,Ralf R. 6 minutes 45 seconds

There is a difference. I can already say so, so and so the next step would be to have a look at these skin lesions in with respect to the skin color and that is what you're interested in. I understood that.

Pavlov,Viktor V.G.

28 minutes 7 seconds28:07

Pavlov,Viktor V.G. 28 minutes 7 seconds

Yeah, yeah.

Pavlov,Viktor V.G. 28 minutes 11 seconds

Yeah, absolutely.

Pavlov,Viktor V.G. 28 minutes 20 seconds

Mhm.

Raumanns,Ralf R.

28 minutes 21 seconds28:21

Raumanns,Ralf R. 28 minutes 21 seconds

So I'm now working on this for almost six years on skin lesions. My first idea was to also work on on other different medical images, but it's it's it's keep keep on a lot of interesting things about skin lesions. So it's a nice topic, yeah.

Pavlov,Viktor V.G.

28 minutes 38 seconds28:38

Pavlov,Viktor V.G. 28 minutes 38 seconds

Yeah. Great to hear. OK, then chat soon again. Thank you very much for your time and fitting us into your busy schedule. Yeah, chat soon. Bye, Raf.

Raumanns,Ralf R.

28 minutes 41 seconds28:41

Raumanns,Ralf R. 28 minutes 41 seconds

OK, OK.

Raumanns,Ralf R. 28 minutes 45 seconds

You're welcome.

Raumanns,Ralf R. 28 minutes 47 seconds

All right. Bye, bye.
